Vasectomy	395
Pathology Review	275

- All procedures and investigation fees include specialist charges, local anaesthetic, theatre, diagnostic pathology and consumables where relevant
- Excision charges are based upon 1 lesion for pathology. If more than 1 lesion is removed there is an additional charge of £100 per lesion to cover extra pathology charges
- Consultation fees are charged separately except in the case of vasectomy which is a full package price
- These are standard charges but some may vary according to agreements with medical insurance companies.
- Patients paying for their own treatment, resident overseas or with non UK based insurers will be expected to settle charges in full on the day.
- Patients insured with UK based insurers will be required to provide a membership and pre-authorisation number for the invoices to be submitted directly to their insurer.
- Patients with medical insurance will remain liable for all charges until settled and will be asked to pay for invoices not settled within 3 months in addition to any policy excesses or items not covered by their insurer.
- In-patient surgical procedures are billed in accordance with insurance company guidelines and patients will be provided with the CCSD code to gain pre-authorisation for the procedure and admission from their insurers. Self pay patients will be provided with a fee estimate in advance of the procedure to cover surgeon, anaesthetist and hospital charges. As a guide fees are routinely in accordance with the WPA fee schedule <http://www.wpa.org.uk/medical/feesearch.aspx>
